Meeting notes – 2026-11-02

Attendees

Lucía Anguita Luna
Liam Bezanilla Alonso
Alexandru Ilie Gabriel

Agenda

1. Second document
2. Data bases selections
3. Firewall rules

Decisions

On this meeting we decided to use non relational databases like MongoDB for the events and logs, vectorial databases like Quadrant for the company documents. The user will log in into the web page,a token will be assigned to the user by Cognito the user will write a message depending on its role parts of the document will be added to the final message by the RAG assistant from the vectorial databases the firewall will check the message of the user to see if its malicious or not it will also check if there is sensitive data if there is it will mask it if the message is malicious it will be blacked and the user will get a generic message, if everything is okey the AI will respond to de message.
